AK Clamp Adjustment Manual

INTRODUCTION

Before using the scope carefully read this instruction manual. Your mount is a quick detach side mount that will fit any standard AK side mount as found on most varieties of AK rifles, Saiga, AK-74, etc. It will hold zero when re-attached and has 1" or 30 mm rings to fit any standard scope.

Clamp Adjustment

Step 1: Locate the retaining clip that is holding the lever onto the scope. Place a small flat screwdriver blade on the edge of the retaining clip, and using your thumb rotate the retainer out of its indentation.

Step 2: Once the retaining clip is rotated 90 degrees, you can easily slide it off of the center shaft of the clamp lever. It will now pull off of the scope.

Step 3: Once the clip is removed, you can disengage the lever from its gear on the center shaft. Be sure not to lose the clip or the washer underneath the lever.

Step 5: After reassembling, replace the lever retaining clip by inserting the center shaft into the large hole in the clip.

Step 4: Slide the scope onto your side rail and then reposition the lever so that you have a nice tight fit. Be careful not to over-tighten! For eccentric mounts where you have a half-moon at the mount end of the lever, you need to align it properly. For screw mounts, you have to rotate the screw by using the lever upside down until the bottom of the mount pulls up tight against the bottom of your side plate. Once the proper tension is obtained, replace the lever onto the gear. Also make sure you have not lost the special washer that fits under the lever.

Step 6: Simply slide the clip back into the indentation. Try the fit, make sure the scope will slide onto the plate easily, and will also tighten up. There should be a moderate amount of tension on the lever when it is about 85 percent closed, and it should take mild pressure to lock it completely. Do not over-tighten. Repeat the procedure to adjust the tension if needed.
